

Project Voting 448 Kickoff

Background and context

The instructor wants a simple web-based voting app to let students vote on available projects. The site must allow users to view project options, cast a vote, and see a basic tally.

Objectives

- Use GitLab to plan your team's work and to distribute the work across all team members.
- Effectively manage the team's code using commits, branches, and merge requests.

Scope and deliverables

ID	Deliverable	Description
UC-1	Team Navigation	As a user, I want to navigate to each team's team page.
UC-2	Team Page	As a user, I want to use the team's voting solution.

Milestones

Completion date	Project phase	Description
Tuesday, 8/26/25	In Class: Course Introductions Feature: Clone the project	Form teams and each team member shall clone the project.
Thursday, 8/28/25	In Class: review use of Gitlab for planning Feature: Navigate to the team page	Create a team page [UC-1] Add navigation to the main landing page by updating site.js.
Tuesday, 9/2/25	In Class: review code management Feature: Create the voting system	Create the voting system [UC-1] Add features to demonstrate participation by all team members.
Thursday, 9/4/25	In Class: Discuss instructor meetings and next steps, review deliverables Feature: provide support for any remaining work on the kickoff exercise	Discuss instructor meetings. Any remaining time is open for help.

Requirements [MVP]:

1. A landing page (HTML) with:
 - A title and short description.
 - A list of 3–4 upcoming projects with a "Vote" button for each.
2. When a user clicks "Vote," use JavaScript to:
 - Record the vote in memory (no database, just client-side array/object).
 - Update a results section showing the total votes per event.
3. Include a simple results chart or table (basic HTML list or bar-style visualization with CSS/JS).
4. Stretch Goal:
 - Prototype a feature to rank the projects instead of voting on them. Display the project in order by rank.
 - Stretch UI/UX: drag and drop the projects into the ranking order

NOTE:

part of the Canvas assignment is to see that every team member has submitted content. You will need to add other features (that go along with this idea) in order to satisfy that objective.
